

# ADF4356 Datasheet Update

## Background

- ► Following a review of datasheet parameters, and to bring enhanced clarity to the operational performance of the part, some specifications have be updated and the production test accordingly enhanced.
- ► The max input frequency for 4/5 prescaler is reduced to 5.7GHz and 6GHz (see next slide for details).
- NB→ ADF4356 has not been altered (no changes to part fabrication, assembly). In most cases, customers can continue to use the part with same performance.

# Specification Change: RF Output Frequency

- New RF Output Characteristics are based on updated characterization and yield results
- Specifications have been clarified compared to previous datasheet revision

### <u>Updated</u>

RF OUTPUT CHARACTERISTICS				
· VCO Frequency Range	3400	6800	MHz	Fundamental VCO range
RF <sub>OUT</sub> A+/RF <sub>OUT</sub> A- and RF <sub>OUT</sub> B+/RF <sub>OUT</sub> B-Frequency	53.125	6800	MHz	Prescaler = 8/9
RF <sub>OUT</sub> A+/RF <sub>OUT</sub> A- Frequency	53.125	6000	MHz	Prescaler = 4/5, T <sub>A</sub> ≥ 25°C
RF <sub>OUT</sub> A+/RF <sub>OUT</sub> A- Frequency	53.125	5700	MHz	Prescaler = 4/5
RF <sub>OUT</sub> B+/RF <sub>OUT</sub> B-Frequency	53.125	6800	MHz	Prescaler = 4/5, Divided Feedback to N counter with Output Divider ≥ 2
RF <sub>OUT</sub> B+/RF <sub>OUT</sub> B-Frequency	53.125	6000	MHz	Prescaler = 4/5, Fundamental Feedback to N counter, $T_A \ge 25$ °C
RF <sub>OUT</sub> B+/RF <sub>OUT</sub> B-Frequency	53.125	5700	MHz	Prescaler = 4/5, Fundamental Feedback to N counter

## Prescaler Setting Explained

► A note has been added to explain how to set Prescaler Value

## ▶ Updated:

#### **Prescaler Value**

The dual modulus prescaler (P/P+1), along with the INT, FRACx, and MODx counters, determines the overall division ratio from the VCO output to the PFD input. The PR1 bit (Bit DB20) in Register 0 sets the prescaler value.

Operating at CML levels, the prescaler takes the clock from the VCO output and divides it down for the counters. It is based on a synchronous 4/5 core. When the prescaler is set to 4/5, the maximum RF frequency allowed is 6 GHz when  $T_A \geq 25$  and 5.7 GHz for all temperature range. It is still possible to generate frequencies up to 6.8 GHz from RF output B with prescaler 4/5 by enabling RF Output B Select bit (Bit DB25) in Register 6. The Feedback Select bit (DB24) in Register 6 is set to Divided and output divider is set to greater than 2. The prescaler limits the INT value; therefore, if P is 4/5,  $N_{\rm MIN}$  is 23, and if P is 8/9,  $N_{\rm MIN}$  is 75.

## ► Previously:

#### Prescaler Value

The dual modulus prescaler (P/P + 1), along with the INT, FRACx, and MODx counters, determines the overall division ratio from the VCO output to the PFD input. The PR1 bit (Bit DB20) in Register 0 sets the prescaler value.

Operating at CML levels, the prescaler takes the clock from the VCO output and divides it down for the counters. It is based on a synchronous 4/5 core. When the prescaler is set to 4/5, the maximum RF frequency allowed is 7 GHz. The prescaler limits the INT value; therefore, if P is 4/5,  $N_{MIN}$  is 23, and if P is 8/9,  $N_{MIN}$  is 75.
