

GENERAL DESCRIPTION

The DSTINIm400 and DSTINIs400 are fully assembled and tested circuit boards that evaluate the DS80C400 network microcontroller. In addition to the DS80C400, the DSTINIm400 includes a real-time clock, 1MB flash, 1MB static RAM, and support for an external Ethernet PHY for connecting to a wide variety of networks. The circuit board is designed as a module to be plugged into a 144-pin SODIMM connector. The DSTINIs400 includes a 144-pin SODIMM connector and provides 1-Wire[®], CAN2.0B, serial and a 10/100 Ethernet PHY for connecting the TINIm400 to the physical world. For evaluation, the DSTINIm400 can be inserted into the DSTINIs400 socket board. The combination of the two boards allows full evaluation of the features of the DS80C400.

1-Wire is a registered trademark of Dallas Semiconductor.

FEATURES

- Hosts the TINI Runtime Environment in Validated Hardware Design (In Conjunction with the DSTINIm400)
- 10/100 Base-T Ethernet Port
- Two Serial Ports
- Dual 1-Wire Network Ports
- CAN2.0B Port
- 5.0V Single-Supply Operation
- Fully Assembled and Tested Design
- Easily Expands to Support Xilinx Coolrunner CPLDs

ORDERING INFORMATION

PART	TEMP RANGE	IC PACKAGE
DSTINIs400-010	0°C to +70°C	Sockets Board

Note: To evaluate the DS80C400, order both a DSTINIm400 and a DSTINIs400.

COMPONENT LIST

DESIGNATION	QTY	DESCRIPTION
C1	1	47pF, 1206
C2, C4–C6	4	47µF, 1206
C3, C7, C9, C13, C15, C26, C28, C30, C38	9	100NF, 1206
C12, C14, C17, C19, C25, C27, C29, C33, C37	9	10NF, 1206
C8	1	220nF, 1206
C10, C31, C32, C34–C36	6	1.0µF, 1206
C11	1	4.7µF, 1206
C16, C18	2	270pF, 1206
C20–C22	3	1nF, 2kV thru-hole
C23, C24	2	27pF, 1206
D1	1	1N5908 D0-201
D2	1	BAT54 SOT-23
J1	1	DIMM144
J2	1	2.5mm center, 5.5mm outside barrel connector
J7	1	RJ-45
J9–J11	3	3-pin, 0.1 centers
J12	1	DB9 serial female
J13	1	DB9 serial male

DESIGNATION	QTY	DESCRIPTION
J14	1	Pad jumper
J15	1	DS9094F
J16	1	RJ11 serial connector
L1	1	22µH inductor
R1	1	205kΩ, ±1% 1206
R2	1	121kΩ, ±1% 1206
R16	1	10kΩ, 1206
R4–R7, R8, R10–R12	8	49.9Ω, ±1% 1206
R13, R9	2	47Ω, 1206
R14	1	22.1kΩ, ±1% 1206
R15, R17, R18	3	220Ω, 1206
R19	1	Pad jumper
R20	1	47kΩ, 1206
R24	1	10kΩ, 1206
T1	1	S558_5999_T7 transformer
U1	1	MAX1692
U2	1	MAX1792EUA18
U3	1	LXT972ALC Ethernet PHY

COMPONENT LIST (continued)

DESIGNATION	QTY	DESCRIPTION
U4–U6	3	Dialight 597-7741 LED
U7	1	MAX560CAI
U8	1	DS2480B
U9	1	DS9502
Y1	1	25.000MHz, HC49
Z1,Z2,Z3	3	Ferrite Bead, Fair-Rite 2512067007Y3
UNPOPULATED COMPONENTS		
U12	1	Xilinx Coolrunner XC2C64- 7VQ100C
U10	1	DS2408 1x8 wire (Contact factory)

JUMPERS**Network Boot Jumper (J3)**

JUMPER	CONFIGURATION
1–2	DS80C400 attempts to boot through Ethernet using DHCP and TFTP

Quiet Boot Jumper (J5)

JUMPER	CONFIGURATION
1–2	DS80C400 boots without sending loader information to serial port.

Auto Negotiation Jumper (J9)

JUMPER	CONFIGURATION
1–2	Auto-negotiation disabled.
2–3	Auto-negotiation enabled.

10/100Mb Ethernet Jumper (J10)

JUMPER	CONFIGURATION
1–2	100Mb Ethernet operation.
2–3	10Mb Ethernet operation.

Full Duplex Jumper (J11)

JUMPER	CONFIGURATION
1–2	Ethernet is configured for full-duplex operation.
2–3	Ethernet is configured for half-duplex operation.

DTR Reset Jumper (J11)

JUMPER	CONFIGURATION
1–2	DTR reset is used for communication with the DS80C400 loader application.

QUICK START

Recommended Equipment

The minimum hardware and software requirements are:

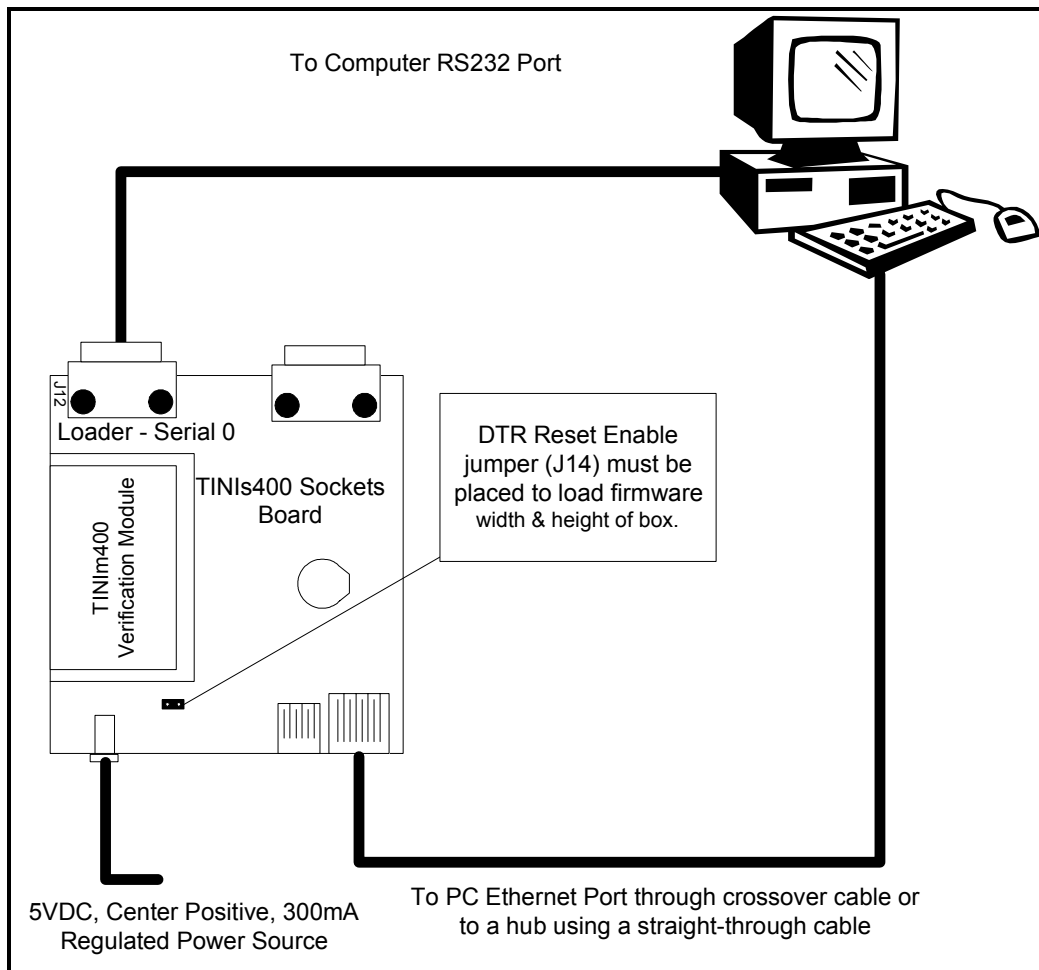

- TINI Hardware Requirements
TINI400 Verification Module or equivalent
TINIs400 Sockets Board or equivalent
- TINI Software Requirements
[TINI Software Development Kit](#) Version 1.1 or later
[JDK \(Java™ Development Kit\)](#) from Sun Microsystems or equivalent¹
[Java Communications API](#) from Sun Microsystems or www.rxtx.org
- Development System Requirements
Operating system meeting requirements of the JDK from Sun Microsystems
One RS232 (COM) port—115200 baud recommended
[RS232C serial cable DB9 male to DB9 female](#): Radio Shack Catalog Number 26-117 or equivalent
[Crossover Ethernet cable](#): For direct connection to a host computer, use a crossover Ethernet cable such as the Radio Shack Catalog Number 950-0368 or equivalent. To connect to a router or hub, use a straight-through Ethernet cable.
[5V DC power supply](#) capable of supplying 150mA: Radio Shack Catalog Number 900-2740 or equivalent (center positive)

Procedure

- 1) Prior to beginning, verify power is not connected to the TINIs400 sockets board.
- 2) Insert the TINI400 Verification Module into the 144-pin connector on the TINIs400 sockets board.
- 3) Verify the jumper labeled as DTR Reset (J14) is placed on the sockets board.
- 4) Attach an RS232 serial cable to the connector labeled “Loader–Serial 0” on the TINI400 sockets board as shown in [Figure 1](#).
- 5) Connect the serial cable to a serial port on your PC.
- 6) Next, attach the crossover Ethernet cable between the PC and the TINIs400 sockets board.
- 7) **Note:** *If the TINI sockets board is not being connected directly to a network interface card but instead to a separate network port on a hub or switch, a straight-through Ethernet patch cable should be used.*
- 8) Connect the power adapter to your TINIs400 sockets board as shown in [Figure 1](#). A center positive 5V DC-regulated power supply must be used with the TINIs400 sockets board. Other socket boards may have different power requirements. Refer to the sockets board documentation for more information.
- 9) Plug the power adapter into a wall socket.

¹ The TINI Software Development Kit has been extensively tested with JDK1.3 from Sun Microsystems. Later versions of the JDK should work in the same manner. Check the documentation for your version of the JDK to verify the installation procedure.

Java is a trademark of Sun Microsystems.

Figure 1. Typical Hardware Setup

SOFTWARE SETUP

First, download and install the Java Development Kit and Java Communications API from Sun Microsystems. Installation instructions and example applications are included in both packages. You should verify correct installation by running the `BlackBox` example provided with the Java Communications API.

Loading the TINI Runtime Environment

Download the TINI Software Development Kit from www.maxim-ic.com/TINI. The download file should be unzipped to a location of your choice on your hard drive (<TINI SDK Install Dir>).

To begin using the TINIm400 Verification Module, the TINI runtime environment must first be loaded into the flash of the verification module. Loading the runtime environment requires executing a program called `JavaKit`. Application binaries are loaded through the serial port of the TINI verification module.

Running JavaKit

- 1) To run JavaKit, open a command shell or DOS prompt on your PC. Change to the <TINI SDK Install Dir>\bin directory.
- 2) Next, type `java -classpath tini.jar JavaKit -400 -flash 40` at the command prompt and press Enter to run the JavaKit application. If you have the Java Development Kit and the Java Communications API properly installed, JavaKit should appear on the screen.
- 3) Select the port name where the TINI Verification Module is attached. Press the Open Port button. The default baud rate of 115200 should be used on all platforms where it is supported.
- 4) After opening the port, press the Reset button. The loader prompt should be displayed on the JavaKit screen ([Figure 2](#)).
- 5) If the message is not displayed, verify the cable connections and check that the correct port name is selected. If everything appears to be attached correctly, read the `Running_JavaKit.txt` file contained in the TINI SDK for more detailed information.
- 6) At the JavaKit prompt, type **B0** and press Enter, followed by **F0** and Enter. This clears the RAM of the TINI Verification Module. Any time a new runtime environment is loaded the memory should be cleared.
- 7) Now click on the `File` menu in JavaKit and select `Load File`. A file dialog appears on the screen. Browse to the <TINI SDK Install Dir>\bin directory and select the `tini_400.tbin` file and click the Open button. Load Complete is displayed on the screen when the firmware is loaded; this can take up to 30 seconds.
- 8) To load the command shell, click on the `File` menu and select `Load File` again. Select the `slush_400.tbin` file and click on the Open button. When Load Complete appears, slush has been successfully loaded into the flash of the TINIm400 Verification Module.
- 9) Press the Reset button and the JavaKit loader prompt shown in [Figure 2](#) is displayed.
- 10) At the JavaKit prompt, type `E` and hit Enter. Slush begins booting and text similar to that shown in [Figure 3](#) prints on the JavaKit screen.
- 11) Press Enter and a slush login prompt is displayed. Type in the username `root` and press Enter. The initial password is `tini`.
- 12) You should now be logged into slush. To view a list of valid shell commands, type `help` at the command prompt. Detailed information on specific commands, such as `dir`, can be obtained by typing `help`, followed by the command.

Figure 2. JavaKit Loader Prompt

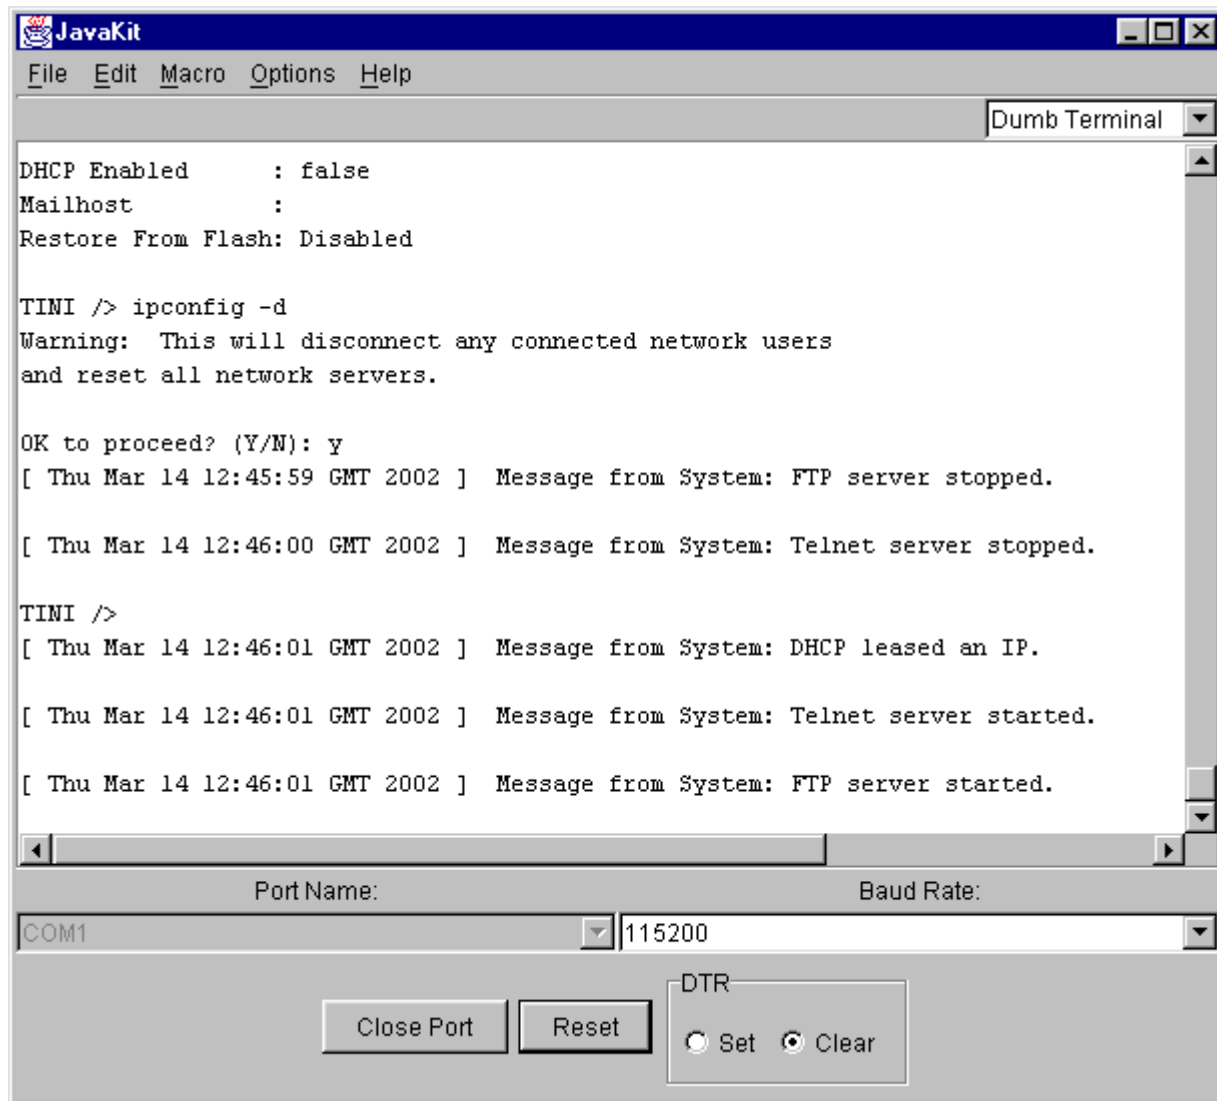

Figure 3. Slush Login Prompt

NETWORK SETUP

One of the primary features of the TINI platform is its ability to access the network. The slush command to configure network access is `ipconfig`². Typing `ipconfig -h` at the command prompt displays detailed configuration options. The `-h` option can be used with any slush command to view options.

The simplest method of connecting to the network is with DHCP, assuming it is supported on your network. To enable DHCP, type `ipconfig -d` and press enter. Once the TINI Verification Module has successfully leased a network address, a message is displayed on the slush prompt indicating success as in [Figure 4](#).

²The DS80C400 ROM supports IPv6 for networking. By default, it is always on and configured automatically.

Figure 4. DHCP Network Configuration

If your network does not support DHCP, then it is necessary to use a static IP address. First, you must get a valid network address and subnet mask from the network administrator. To set the IP address to a static value, use `ipconfig -a x.x.x.x -m y.y.y.y`, where the IP address is denoted by `x.x.x.x` and the subnet is `y.y.y.y`. For example, to set your IP address to 192.168.0.1 with a subnet of 255.255.255.0, type `ipconfig -a 192.168.0.1 -m 255.255.255.0` at the slush command prompt and press Enter.

A good way to test your network settings is to use the ping command. Either attempt to ping the TINI Verification Module from the host computer or ping the host computer from the TINI Verification Module using the slush ping command.

RUNNING YOUR FIRST APPLICATION

The TINI SDK contains many example applications. Each example application has batch files for compiling and converting it to a binary file for execution on the TINI Runtime Environment. A very simple application included with the TINI SDK is `Blinky`. This application blinks an LED (DS1) on the TINIm400. To transfer the application to your TINIm400, open a command prompt on your host computer and change to the `<TINI SDK Install Dir>\examples\Blinky\bin` directory. This directory contains a file called `Blinky.tini`. From the command prompt on the host computer type `ftp`. The commands below connect to the TINI and transfer the `Blinky.tini` file to the TINIm400's file system. Replace the IP address used below with the IP address you set earlier in slush. The default password for `ftp` and `telnet` on the TINI Runtime Environment is `tini`.

```
ftp> open 192.168.0.1
Connected to 192.168.0.1.
220 Welcome to slush. (Version 1.1) Ready for user login.
User (192.168.0.1:(none)): root
331 Password Required for root
Password:
230 User root logged in.
ftp> bin
200 Type set to Binary
ftp> put Blinky.tini
200 Command successful.
150 BINARY connection open, putting Blinky.tini
226 Closing data connection.
ftp: 514 bytes sent in 0.00Seconds 514000.00Kbytes/sec.
ftp> bye
221 Goodbye
```

The file now exists in the TINI file system. Next, connect to your TINIm400 using `telnet` on your PC. Verify the existence of the `Blinky.tini` file using the `slush` command `ls`. To run the `Blinky.tini` file, type `java Blinky.tini`, followed by Enter. The `Blinky` program executes and the LED should begin a steady blink.

MORE INFORMATION

TINI platform details can be found at www.maxim-ic.com/TINI. The *TINI Specification and Developer's Guide* is an invaluable resource when developing with the TINI platform and can be downloaded from our website. Chapter 2 is dedicated to getting started with the TINI platform and includes a detailed description of building and running several small-example applications.

DS80C400 INFORMATION

For more information about the DS80C400, please consult the DS80C400 data sheet available on our website, www.maxim-ic.com/microcontrollers.
