

RELIABILITY REPORT
FOR
MAX8216CPD+

PLASTIC ENCAPSULATED DEVICES

July 28, 2009

MAXIM INTEGRATED PRODUCTS

120 SAN GABRIEL DR. SUNNYVALE, CA 94086

Approved by
Ken Wendel
Quality Assurance
Director, Reliability Engineering

Conclusion

The MAX8215CPD+ successfully meets the quality and reliability standards required of all Maxim products. In addition, Maxim"s continuous reliability monitoring program ensures that all outgoing product will continue to meet Maxim"s quality and reliability standards.

Table of Contents

IDevice Description	VQuality Assurance Information
IIManufacturing Information	VIReliability Evaluation
IIIPackaging Information	IVDie Information
Attachments	

I. Device Description

A. General

The MAX8215 contains five voltage comparators; four are for monitoring $\pm 5V$, $\pm 5V$, $\pm 12V$, and $\pm 12V$, and the fifth monitors any desired voltage. The MAX8216 is identical, except it monitors $\pm 15V$ supplies instead of $\pm 12V$. The resistors required to monitor these voltages and provide comparator hysteresis are included on-chip. All comparators have open-drain outputs. These devices consume $250\mu A$ max supply current over temperature.

II. Manufacturing Information

A. Description/Function: ±5V, ±12V (±15V) Dedicated Microprocessor Voltage Monitors

B. Process: S3

C. Number of Device Transistors:

D. Fabrication Location: Oregon

E. Assembly Location: Thailand, Philippines

F. Date of Initial Production: Pre 1997

III. Packaging Information

A. Package Type: 14-pin PDIP
B. Lead Frame: Copper

C. Lead Finish:

D. Die Attach:

Conductive Epoxy

E. Bondwire:

Gold (1.3 mil dia.)

F. Mold Material:

G. Assembly Diagram:

#05-1701-0132

H. Flammability Rating:

Class UL94-V0

Classification of Moisture Sensitivity per

JEDEC standard J-STD-020-C

J. Single Layer Theta Ja: 100°C/WK. Single Layer Theta Jc: 35°C/W

IV. Die Information

A. Dimensions: 66 X 76 mils

B. Passivation: Si₃N₄/SiO₂ (Silicon nitride/ Silicon dioxide)

Level 1

C. Interconnect: Al/0.5%Cu with Ti/TiN Barrier

D. Backside Metallization: None

E. Minimum Metal Width: 3.0 microns (as drawn)F. Minimum Metal Spacing: 3.0 microns (as drawn)

G. Bondpad Dimensions: 5 mil. Sq.
H. Isolation Dielectric: SiO₂
I. Die Separation Method: Wafer Saw

V. Quality Assurance Information

A. Quality Assurance Contacts: Ken Wendel (Director, Reliability Engineering)

Bryan Preeshl (Managing Director of QA)

B. Outgoing Inspection Level: 0.1% for all electrical parameters guaranteed by the Datasheet.

0.1% For all Visual Defects.

C. Observed Outgoing Defect Rate: < 50 ppmD. Sampling Plan: Mil-Std-105D

VI. Reliability Evaluation

A. Accelerated Life Test

The results of the 135°C biased (static) life test are shown in Table 1. Using these results, the Failure Rate (λ) is calculated as follows:

$$\lambda = \frac{1}{\text{MTTF}} = \frac{1.83}{192 \times 4340 \times 80.2}$$
 (Chi square value for MTTF upper limit)
(where 4340 = Temperature Acceleration factor assuming an activation energy of 0.8eV)
$$\lambda = 13.4 \times 10^{-9}$$

$$x = 13.4 \text{ x}$$
 10
 $x = 13.4 \text{ F.I.T.}$ (60% confidence level @ 25°C)

The following failure rate represents data collected from Maxim's reliability monitor program. Maxim performs quarterly 1000 hour life test monitors on its processes. This data is published in the Product Reliability Report found at http://www.maxim-ic.com/. Current monitor data for the S3 Process results in a FIT Rate of 1.4 @ 25C and 23.4 @ 55C (0.8 eV, 60% UCL)

B. Moisture Resistance Tests

The industry standard 85°C/85%RH or HAST testing is monitored per device process once a quarter.

C. E.S.D. and Latch-Up Testing

The PW36 die type has been found to have all pins able to withstand a HBM transient pulse of +/-400 V per Mil-Std 883 Method 3015.7. Latch-Up testing has shown that this device withstands a current of +/-100 mA.

Table 1Reliability Evaluation Test Results

MAX8215CPD+

TEST ITEM	TEST CONDITION	FAILURE IDENTIFICATION	SAMPLE SIZE	NUMBER OF FAILURES	
Static Life Test (N	Note 1)				
`	Ta = 135°C Biased Time = 192 hrs.	DC Parameters & functionality	80	0	
Moisture Testing	(Note 2)				
85/85	Ta = 85°C RH = 85% Biased Time = 1000hrs.	DC Parameters & functionality	77	0	
Mechanical Stress	s (Note 2)				
Temperature	-65°C/150°C	DC Parameters	77	0	
Cycle	1000 Cycles Method 1010	& functionality
