

RELIABILITY REPORT
FOR
MAX871EUK+T
PLASTIC ENCAPSULATED DEVICES

June 13, 2016

MAXIM INTEGRATED

160 RIO ROBLES SAN JOSE, CA 95134

Approved by
Eric Wright
Quality Assurance
Reliability Engineer

Conclusion

The MAX871EUK+T successfully meets the quality and reliability standards required of all Maxim Integrated products. In addition, Maxim Integrated's continuous reliability monitoring program ensures that all outgoing product will continue to meet Maxim Integrated's quality and reliability standards.

I. Device Description

A. General

The ultra-small MAX870/MAX871 monolithic, CMOS charge-pump inverters accept input voltages ranging from +1.4V to +5.5V. The MAX870 operates at 125kHz, and the MAX871 operates at 500kHz. Their high efficiency (90%) and low operating current (0.7mA for the MAX870) make these devices ideal for both battery-powered and board-level voltage-conversion applications. Oscillator control circuitry and four power MOSFET switches are included on-chip. A typical MAX870/ MAX871 application is generating a -5V supply from a +5V logic supply to power analog circuitry. Both parts come in a 5-pin SOT23-5 package and can deliver 25mA with a voltage drop of 500mV. For a similar device with logic-controlled shutdown, refer to the MAX1720/MAX1721. For applications requiring more power, the MAX860 delivers up to 50mA with a voltage drop of 600mV, in a space-saving µMAX package.

II. Manufacturing Information

A. Description/Function: Switched-Capacitor Voltage Inverters

B. Process: S3C. Fabrication Location: USA

D. Assembly Location: Malaysia, ThailandE. Date of Initial Production: June 26, 1997

III. Packaging Information

A. Package Type: 5-pin SOT23
B. Lead Frame: Copper

C. Lead Finish: 100% matte Tin
D. Die Attach: Conductive
E. Bondwire: Au (1 mil dia.)
F. Mold Material: Epoxy with silica filler

G. Assembly Diagram: #05-1101-0039
H. Flammability Rating: Class UL94-V0

Classification of Moisture Sensitivity
 per JEDEC standard J-STD-020-C

Level 1

J. Single Layer Theta Ja: 324.3°C/W
K. Single Layer Theta Jc: 82°C/W
L. Multi Layer Theta Ja: 255.9°C/W
M. Multi Layer Theta Jc: 81°C/W

IV. Die Information

A. Dimensions: 38X57 mils

B. Passivation: Si₃N₄/SiO₂ (Silicon nitride/ Silicon dioxide)

C. Interconnect: Al/0.5%Cu with Ti/TiN Barrier

D. Backside Metallization: None

E. Minimum Metal Width: 3.0 microns (as drawn)F. Minimum Metal Spacing: 3.0 microns (as drawn)

G. Bondpad Dimensions:

H. Isolation Dielectric: SiO₂I. Die Separation Method: Wafer Saw

V. Quality Assurance Information

A. Quality Assurance Contacts: Eric Wright (Reliability Engineering)

Bryan Preeshl (Vice President of QA)

B. Outgoing Inspection Level: 0.1% for all electrical parameters guaranteed by the Datasheet.

0.1% for all Visual Defects.

C. Observed Outgoing Defect Rate: < 50 ppm
D. Sampling Plan: Mil-Std-105D

VI. Reliability Evaluation

A. Accelerated Life Test

The results of the 135C biased (static) life test are shown in Table 1. Using these results, the Failure Rate (3) is calculated as follows:

$$\lambda = \frac{1}{\text{MTTF}}$$
 = $\frac{1.83}{192 \times 4340 \times 80 \times 2}$ (Chi square value for MTTF upper limit)

(where 4340 = Temperature Acceleration factor assuming an activation energy of 0.8eV)

$$\lambda = 13.7 \times 10^{-9}$$

3 = 13.7 F.I.T. (60% confidence level @ 25°C)

The following failure rate represents data collected from Maxim Integrated's reliability monitor program. Maxim Integrated performs quarterly life test monitors on its processes. This data is published in the Reliability Report found at http://www.maximintegrated.com/qa/reliability/monitor. Cumulative monitor data for the S3 Process results in a FIT Rate of 0.04 @ 25C and 0.69 @ 55C (0.8 eV, 60% UCL)

B. E.S.D. and Latch-Up Testing

The PX45-1 die type has been found to have all pins able to withstand a HBM transient pulse of +/-2500V per JEDEC JESD22-A114. Latch-Up testing has shown that this device withstands a current of +/-250mA and overvoltage per JEDEC JESD78.

Table 1Reliability Evaluation Test Results

MAX871EUK+T

TEST ITEM	TEST CONDITION	FAILURE IDENTIFICATION	SAMPLE SIZE	NUMBER OF FAILURES	COMMENTS
Static Life Test (N	ote 1)				
	Ta = 135C	DC Parameters	80	0	
	Biased	& functionality			
	Time = 192 hrs.				

Note 1: Life Test Data may represent plastic DIP qualification lots.
